

The main difference that makes our Own Private Lake Resort unique:

Experience Filipino Innovations

1. The "Bahay-Kubo" (Cube House) by PHILIPP INNO

- This new and improved version of the "Bahay-Kubo" is a patent-applied Prefab Technology innovated by the Filipino Inventor, PHILIPP INNO.

The lightweight yet sturdy Kubos were prefabricated in Angeles City near Clark, Pampanga and were transported to Cavinti, Laguna.

Since it's modular, panelized, and componentized, each Kubo was assembled within a couple of hours only. The Kubo is steel-framed yet by majority, bamboo-based hence it's pleasingly beautiful. It is low on earth impact, low on energy consumption, and low on carbon dioxide emission during construction. This unique PHILIPP INNO designed "Bahay-Kubo" is a Green and Sustainable Structure inspired by our very own Filipino Architecture.

2. Off-Grid System, Solar-powered, LED-lit

- Although the Camping Resort is connected to the power supply provided by the local electric company, it has its own renewable energy source particularly a Solar Photo-voltaic Power System. It harnesses freely the power of the Sun. Hence, we enjoy for free extra electricity that power-up all the sparkling LED lights at night during brownouts.

3. Reduce, Reuse, Recycle

- The Owners of this Resort Property are composed mainly of Architects, Designers, and Builders. Most of the materials used to build the structures and to develop the facilities were either recycled, reused, or re-purposed. It came either from the surplus building and finishing materials from their designed construction projects or sourced out from surplus shops nearby.

So if you love Art, Architecture, and Adventure, this is just the perfect destination to experience Filipino Innovation.
